

Proximus NXT and LuxApps Partner for Enhanced Payroll Management

Luxembourg, November 21, 2024 – Proximus NXT, a key player in advanced technology solutions, has announced a strategic partnership with LuxApps, a company specializing in enterprise management platforms, to deliver an optimized and fully digitalized payroll management experience. This collaboration aims to revolutionize the daily operations of fiduciary and accounting firms with tools tailored to the growing need for automation and data centralization.

LuxApps, through its innovative solution **LUXAPPS FXP**, offers complete digitalization of payroll processes, from data capture to payroll distribution. Leveraging the expertise and reliability of Proximus NXT, LuxApps ensures an efficient and secure solution for clients seeking seamless and high-performance payroll operations.

Data Centralization and Time Savings for Clients

A major focus of this collaboration is client data centralization. By consolidating all payroll information on a single platform, Proximus NXT and LuxApps provide centralized access to data, saving valuable time and accelerating processes. This approach meets the expectations of clients who often lack resources or time, allowing them to concentrate on high-value tasks.

In addition to data centralization, the Proximus NXT and LuxApps partnership offers users several concrete benefits:

Enhanced Compliance: The solution incorporates stringent data protection standards, adhering rigorously to the General Data Protection Regulation (GDPR). This compliance not only secures personal data for users and their clients but also meets the transparency and accountability requirements mandated by GDPR. Advanced security protocols and access control mechanisms provide peace of mind, ensuring payroll operations comply with the latest regulatory frameworks.

Automation of Repetitive Tasks: The solution optimizes resources and saves time by automating low-value processes such as data extraction, payroll calculations, and payslip generation. This automation reduces workload, minimizes human error, and allows teams to focus on strategic tasks. By limiting manual efforts, the solution also boosts productivity, ensuring faster and more efficient processing.

Optimized Data Processing: Speed of data processing is a key aspect of this collaboration. By centralizing information and enabling real-time access, users gain responsiveness and flexibility. This allows for the faster handling of large volumes of data, crucial for complex and recurring payroll operations. This capability is especially beneficial for fiduciary clients working under tight deadlines, enhancing customer experience with faster, more accurate services.

Towards a New Era of Digital Management

This collaboration comes amidst an accelerated digital transformation and addresses strategic challenges for both companies, aiming to expand their market presence and strengthen customer loyalty.

In this dynamic context, Proximus NXT is also preparing to launch a new version of Apsal, designed for seamless integration with partner platforms like LuxApps. Built on advanced web technology and a "thin client" model, the new solution will feature centralized management and enhanced security, enabling instant data exchange with other cloud-based software. By freeing users from maintenance constraints and optimizing connectivity, this version will open new avenues for companies looking to evolve their management models.

About LuxApps

With over 12 years of expertise, LuxApps specializes in developing enterprise management platforms and digitalizing processes. Renowned for its expertise and adaptability, LuxApps supports its clients and partners in their digital transformation by offering reliable and tailored technological solutions.

Responding to the evolving needs of various industries, LuxApps has recently focused on the fiduciary sector in Luxembourg, delivering innovative and client-centric solutions. www.luxapps.lu
